

Taking care of our patient is oriented to its entirety through targeted intervention strategies in cases of traumatology, sports medicine, prosthetic surgery, vertebral pathologies, degenerative arthropathies, painful shoulder, pubalgia, coxalgia, gonalgia, postural deficits, overload diseases , pathologies of the foot, etc ..

We integrate manual therapy, therapeutic exercise, postural re-education, functional recovery.

Both in the acute and chronic phase, but also as a real prevention of degeneration of the osteo-muscle-ligament apparatus.

We study the individual as a whole, identifying causes, symptoms and signs, we try to intervene on these in order to restore the harmony and balance of the organism, trying to give our contribution to the restoration and maintenance of the state. of patient health.
